this study indus basin of pakistan the impacts of climate risks on water and agriculture was undertaken at a pivotal time in the  
 region the weak summer monsoon in 2009 created drought conditions throughout the country this followed an already tenuous  
 situation for many rural households faced with high fuel and fertilizer costs and the impacts of rising global food prices then

---

catastrophic monsoon flooding in 2010 affected over 20 million people devastating their housing infrastructure and crops damages from this single flood event were estimated at us dollar 10 billion half of which were losses in the agriculture sector notwithstanding the debate as to whether these observed extremes are evidence of climate change an investigation is needed regarding the extent to which the country is resilient to these shocks it is thus timely if not critical to focus on climate risks for water agriculture and food security in the indus basin of pakistan

renewal of life by transmission the most notable distinction between living and inanimate things is that the former maintain themselves by renewal a stone when struck resists if its resistance is greater than the force of the blow struck it remains outwardly unchanged otherwise it is shattered into smaller bits never does the stone attempt to react in such a way that it may maintain itself against the blow much less so as to render the blow a contributing factor to its own continued action while the living thing may easily be crushed by superior force it none the less tries to turn the energies which act upon it into means of its own further existence if it cannot do so it does not just split into smaller pieces at least in the higher forms of life but loses its identity as a living thing as long as it endures it struggles to use surrounding energies in its own behalf it uses light air moisture and the material of soil to say that it uses them is to say that it turns them into means of its own conservation as long as it is growing the energy it expends in thus turning the environment to account is more than compensated for by the return it gets it grows understanding the word control in this sense it may be said that a living being is one that subjugates and controls for its own continued activity the energies that would otherwise use it up life is a self renewing process through action upon the environment

in the past decade pakistan has become a country of immense importance to its region the united states and the world with almost 200 million people a 500 000 man army nuclear weapons and a large diaspora in britain and north america pakistan is central to the hopes of jihadis and the fears of their enemies yet the greatest short term threat to pakistan is not islamist insurgency as such but the actions of the united states and the greatest long term threat is ecological change anatol lieven s book is a magisterial investigation of this highly complex and often poorly understood country its regions ethnicities competing religious traditions varied social landscapes deep political tensions and historical patterns of violence but also its surprising underlying stability rooted in kinship patronage and the power of entrenched local elites engagingly written combining history and profound analysis with reportage from lieven s extensive travels as a journalist and academic pakistan a hard country is both utterly compelling and deeply revealing
